Safety Statement: Bio-Active Silver Hydrosol™

ARGENTYN 23® (23 PPM) CANNOT CAUSE ARGYRIA

It is without hesitation that I support and applaud Sovereign
Naturals (*formerly Natural Immunogenics*) for making, since
2001, a safe and pure silver product intended for daily
professional use.

I have examined and used Argentyn 23 in its liquid and gel
forms, in varying applications in adults, children and pets, and
have found it to be extremely effective in enhancing the
immune system while also acting as a regenerative agent.

Every so often, there is increased scrutiny about colloidal silver
leading to Argyria, a benign blueish-grey cosmetic condition
that is thought to be irreversible. The truth is Argyria can only
result from the heavy consumption of poorly made silver
products, especially those that are homemade, of high parts-
per-million (ppm), and which contain impurities. These
impurities form silver compounds that cannot be easily
eliminated from the body and accumulate over time. This is
not applicable to Argentyn 23.

I have reviewed the test results from a photo-toxicity study,
performed by an accredited laboratory following standards
established and recognized by international regulatory
agencies, and confirm that Argentyn 23 cannot cause Argyria.

The Good Manufacturing Practices (GMPs) and laboratory
controls followed by the company to ensure finished product
quality, purity, safety and efficacy are parallel, if not superior,
to those of major pharmaceutical companies.

I am grateful for Natural Immunogenics' high level of ethics
and principles, taking no shortcuts to deliver such a critical tool
for humanity.
